

# Perform Vulnerability Scanning using Nessus

***ILABS***  
***CEH PRACTICAL***

@mmar

**Nessus** is an assessment solution for identifying vulnerabilities, configuration issues, and malware, which can be used to penetrate networks. It performs vulnerability, configuration, and compliance assessment. It supports various technologies such as OSes, network devices, hypervisors, databases, tablets/phones, web servers, and critical infrastructure

## Aim

In this task, we will use Nessus to perform vulnerability scanning on the target system

DEMO

A grayscale photograph of a calm sea with a small structure on the right and mountains in the background. The word 'THANKS' is overlaid in the center.

# THANKS
