Harvest Users' Credentials using the Social-Engineer Toolkit

ILABS
CEH PRACTICAL

@mmar

The **Social-Engineer Toolkit (SET)** is an open-source, Python-driven tool that enables penetration testing via social engineering. It is a generic exploit that can be used to carry out advanced attacks against human targets in order to get them to offer up sensitive information. SET categorizes attacks according to the attack vector used to trick people such as email, web, or USB. The toolkit attacks human weakness, exploiting people's trust, fear, avarice, or helping natures.

Aim

In this task, we will sniff user credentials on the Android platform using SET

We will setup a fake phishing website and then using phishing we will harness the credentials from user

DEMO
